

POLYGLUCAN

Support of the immune function

Ref: 1019

Presentation:

Jar of 60 capsules

Directions :

*Take 30 minutes before the meal
on an empty stomach or as
advised*

Do not use:

No known cases

What are beta glucans ?

The Beta1,3-glucans are structurally complex glucoses homopolymer related together in a 1,3beta configuration.

The immuno-modulatory action of the Glucans is known for more than 40 years after experiences had indicated that it stimulated the activation of macrophages with the activation of the supplement system.

Several works isolated the immuno-modulatory active component: the glucans

Numerous studies (currently more than 4.000 publications) have then showed that the beta1,3-glucans presents the most interesting immuno-stimulating properties including antibacterial activities and anti-tumoral.

Composition for 1 capsule : extract of saccharomyces cerevisiae walls: 500mg

86.6% 1.3 poly glucose: 433mg – 2.1% 1.6 poly glucose: 1.05mg – 5.8% 2.3 poly glucose: 2.9mg 3.6% glucose: 1.8mg
